

# 2018-2019 Influenza Season Surveillance Report

*Everyone 6 months and older should get a flu vaccine*

## Summary (Week 49: December 2 – December 8, 2018)

Current influenza activity is **LOCAL ACTIVITY** in the Peoria Region, with OSF Saint Francis Medical Center, UnityPoint Health Methodist|Proctor|Pekin, and Hopedale Hospital reporting 8 positive influenza tests.

The Illinois Department of Public Health reported state-wide flu activity as **LOCAL ACTIVITY** (Isolated lab-confirmed cases OR lab-confirmed outbreak in one institution).

## Peoria Region Trend

Week	Health Care Providers: SFMC, UP-M/P, HMC, Pekin					Comment
	Positive Tests	Number of Tests	Percentage Positive	Admission	ICU Admission	
Week 40	0	0	0%	0	0	No Subtype
Week 41	0	0	0%	0	0	No Subtype
Week 42	0	0	0%	0	0	No Subtype
Week 43	0	0	0%	0	0	No Subtype
Week 44	0	278	0%	0	0	No Subtype
Week 45	1	248	0.4%	0	0	Subtype A
Week 46	6	264	2.3%	2	1	Subtype A & B
Week 47	1	273	0.3%	0	0	Subtype A
Week 48	2	262	0.7%	0	0	Subtype A & B
Week 49*	8	338	2.4%	2	0	Subtype A & B
<b>TOTAL</b>	<b>18</b>	<b>1663</b>	<b>1.1%</b>	<b>4</b>	<b>1</b>	

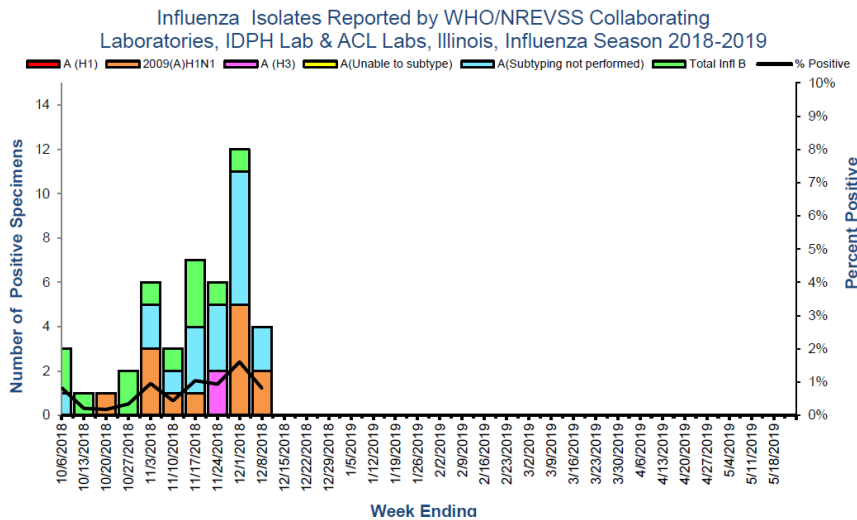

\*Reporting from only specified sources (Week 49= No information from Hopedale Hospital)

### Reporting to Peoria City County Health Department:

- <5 influenza cases requiring ICU hospitalization in the past 30 days

# State and National Trends

## State Trends

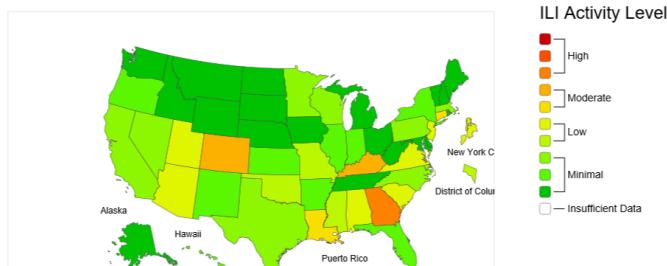

- **For week 48** there were 492 influenza specimens tested by WHO/NREVSS collaborating Illinois laboratories and IDPH Laboratories; 4 specimens tested positive for Influenza: **0.8% positives.**
- **THREE (3) influenza-associated Intensive Care Unit (ICU)** admissions were reported in Illinois for this reporting week.
- For this reporting week, **zero (0) influenza outbreaks** were reported in Illinois.

## National Trends

The proportion of outpatient visits within Illinois for influenza-like illness (ILI) was 1.8% which is **NORMAL** in comparison to the national Region 5 baseline of 1.8%.

2018-19 Influenza Season Week 49 ending Dec 08, 2018

\*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.  
 \*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.  
 \*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.  
 \*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.  
 \*For the data download you can use Activity Level for the number and Activity Level Label for the text description.

Percentage of Visits for Influenza-like Illness (ILI) Reported by the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Weekly National Summary, 2018-2019 and Selected Previous Seasons
